

CANADA BUILDS LOCOMOTIVES.

1046

Ready for war in the Far East; Canadian firms are building locomotives to the order of the Government of India. Working on the method of the assembly line, the great Dominion turns out no less than one of these giant engines every day. After testing, they are dismantled and shipped off to Bombay, to be re-assembled by Indian engineers. Indian railways have the widest-gauge track in the world; record loads will be hauled along them, to mount the great land offensive against Japan.

WILD GEESE.

~~War on war makes very little difference to the world of wild birds, who carry on their seasonal travels without having to worry about the transport restrictions.~~ These are wild geese, resting in California on their way south for the winter. Before the war, the newsreels always used to film the annual migration of the bathing belle ~~from~~^{to} Florida, but that seems to have become a redundant industry. If it's any consolation, wild geese don't wear red flannel pants either.

BRAZIL DIAMONDS.

Brazil has discovered new deposits of diamonds in the search for fresh supplies for cutting tools ^{for} industry. Sixty thousand miners ~~are~~ ~~thousands of square miles~~ securing these valuable gems for our war needs. These industrial diamonds are seldom good enough for jewellery; but it's grand to know that diamonds in wartime are doing a worth-while job; too many in peace time were no better than ivy, hanging round an old ruin.
