

2430

As the great traffic crawl begins once again through our city streets, America's "helibus" outlines the way to highspeed passenger travel.

A full load of nineteen and it's "all aboard!"

This new ~~luxury~~ luxury helicopter is making ~~trips~~ trips around Philadelphia. With intermediate stopping places, would it be so very impracticable for ^{transport around our large cities?} ~~city transport~~. ~~As these bus fares keep on rising - we'll be getting sky-high travel anyway.~~

Meanwhile - as America's defence-line moves northwards to the Arctic Circle, the Hercules cargo/troop carrier is equipped ~~for~~ with huge skis mounted outside the wheels.

~~To~~ To ease runway problems, the four ~~turboprop~~ turbo-jet engines get it airborne in an incredibly short time.

Coming into land, this sixty-two ton, 350 miles per hour giant, touches down with the grace and skill of a winter-sports-champion.

Following his inventive genius - man has already turned his attentions to the conquest of outer space.

Here, at Fort Belvoir, Virginia, scientists are coating the first ^{earth} man-made/satellite.

And here we see for the first time - the tiny world as it leaves the processing chamber. ~~It~~ It has been insulated against the extremes of temperature ~~in~~ - three hundred miles above the earth...

Not much bigger than a football - the tiny globe (carrying delicate scientific instruments) will relay back/data of the unknown.
