ROCKET GUNS.... FIRST PICTURES.

Britain's Rocket Projectors - - the hitherto secret weapons of our anti-aircraft defence. Every time a battery of

rockets is fired it costs nearly a thousand pounds. First newscast pictures show what it's like to be near a Z Battery when the projectors let fly.

It's more familiar seeing and hearing it at night, with its rushing swish, cascade of flaming ~~streaks~~ tails, and the devil's tattoo in the sky.

Specially selected Home Guardsmen man the electrically controlled rocket barrage which no other country in the world possesses.
