FROGMEN'S TRAINING

EXCLUSIVE

Positive developed ; 88 meters - 291 ft.

In agreement with the International Forces Headquarters, and following World War II experience of modern warfare, France has created a special corps of Frogmen Commandos.

The men, selected among the best sportsmen and swimmers were trained, and are following special courses near Toulon. They lately took part in the Allied Manoeuvres in Arzew in Algeria.

This coverage shows the different phases of an entire course the men are trained to jump with their special equipment in the water, from a boat, from a line, then they are parachuted at sea with special equipment to carry on a destruction mission on ports and enemy ships. When the operation has successfully been carried on, the men are picked up by a navy speedboat by means of a "cercle".

Spectacular pictures show the different operation of this very special training course, which is the only one in France.
