

Submarine

A radical new submarine puts out to sea near Portsmouth, New Hampshire. The crew of the U.S.S. Albacore is testing the fastest undersea craft built. But new designs don't change sailors' appetites.

New airplane-type controls are used in steering, diving & surfacing. The "up periscope" order is given as she nears the surface.

The Albacore is also the most maneuverable sub ever built. Designed to stay under water most of the time, her blimp-shaped hull gives best performance in the depths. The Navy plans an atomic submarine like the revolutionary Albacore.
