SCALE MODEL OF FLYING BOAT TESTED.

It looks like a pukka flying boat, but actually it is a Sare Scale Model of a giant to be built! The giant flying boat will be a fifty tonner, costing about £150,000, so you will understand, the designers can't afford to make mistakes in the workshops... Hence this model, which has four 90 horse power engines. The big aircraft will be a (four engined) eight-thousand horse power boat.

She's up - - plane, pilot and passenger! So it seems that the test is justifying itself... From this model will be developed the largest flying boat at present in operation, capable of flying non-stop from Southampton to New York.

A good and safe landing ..... so its O.K. to go ahead with the Giant.
